

Intuiter

Drive Safe

with the help of a smart device applicable for everyone

Intuiter

Intuiter is a cause.

Our product is dedicated to driving safety and it aims to prevent distraction from using cell phone while driving.

**“Text Messaging Creates A Crash Risk
23 Times Worse Than Driving While
Not Distracted. (Virginia Tech Transportation
Institute Or VTTI)”**

The Problem

A quick social media update at a red light.

A text to let a friend know you're running late.

A double tap on a photo while stuck in traffic.

Nearly everyone agrees that texting and driving is dangerous. Most people do it anyway **but on what cost?**

The Solution

Intuiter

It relies on integrated hardware device wirelessly connected to the driver's phone.

Intuiter allows you to take calls, play music and use GPS only from the car Active Info Display. It doesn't allow you to touch and look at your phone while driving.

In case the driver doesn't respect the instructions and tries to bypass the system an alarm build in the car will be activated and the administrator or "parent" will be notified for the location and drivers' behavior.

No Monthly Fee! No Contract! 3G/2G Realtime Car GPS Tracker. Works with SIM card, build in USB charger Web account & Android/iOS Apps. Full service-connected car product with Real Time Car GPS tracking, 3 Minutes Real-time GPS with 60/30/15 seconds upgrades available. No battery needed!

The Product

What are the features of this device?

- Prevents the user to text and drive or use his mobile device while the engine of the vehicle is on.
- The vehicle is trackable from web and mobile application.
- Device reports driver behavior and alarms when mobile phone is not secure placed in motion.
- Car black box is optional.

How does it work?

1. Administrator creates as many user/driver's accounts needed with the mobile/web app.
2. User needs to identify itself with the device by using [Intuiter's](#) app.
3. Before takeoff driver must place its cellphone into the holder.
4. If the drivers wants to use his phone the car must be safely parked, and the engine must be off in order to not activate the built-in alarm

Administrator control

- Administrator receives notifications when the alarm accrues and reports the exact location, date and time.
- System keeps history of driver's behavior.
- The car can be tracked and located on admin request.
- All the collected data can be used for statistic analysis.

- 
- The road safety market is projected to grow from USD 3.0 billion in 2019 to USD 4.7 billion by 2024
 - Major factors driving the road safety market include rising urban population and high demographic rates, rapid motorization, increasing number of road fatalities/accidents, and government initiatives for enhancing road safety.
